

When you insert your Project CD, you will be prompted to open your ViC Viewer™ Project in Windows® Media Player®. If you have a ViC Clipper™ or ViC Marker™ Project you'll have the choice of opening it in either Media Player or the InterClipper® program.

The first time you open a Project in InterClipper, you will be prompted to install both the InterClipper program and your Project.

After you install the program you only need to install each new InterClipper Project in order to open it in InterClipper.

Note: If the prompt screen doesn't automatically appear when you insert the CD, Run Setup.exe from the Project CD.

ViC Viewer

Watch in Media Player
